

# PRODUCT FITTING MANUAL

## 01 SAFEPROP : ACTIVATING ONSITE

1. Remove the pre-loaded SAFEPROP unit from the storage stillage.
2. Place the SAFEPROP unit face down on the floor in the position the main backdrop is required to support the slab.
3. Fit the main prop over the central shaft of the SAFEPROP unit and tighten the main prop to the floor/ceiling.
4. Once the main prop is tightened firmly this will push the SAFEPROP unit plates flush together.
5. Release both preload pins on the sides of the SAFEPROP unit.
6. SAFEPROP is now activated and will support the main prop from dislodging while in the back-propping position during any slab deflection movement.

## 02 SAFEPROP : DEACTIVATING ONSITE

1. Check to make sure all plates are tight together - two plates of SAFEPROP and the plate of the main prop.
2. Turn both preload pins on the SAFEPROP unit to the locked position.
3. Ensure both pin tips are visual and supporting the inside plate of the SAFEPROP unit.
4. Untighten the main prop.
5. Lift and remove main prop from the shaft of the SAFEPROP unit.
6. Store the pre-loaded SAFEPROP back in the stillage until required to be used again onsite.

## IMPORTANT PRODUCT NOTES

- Regular maintenance checks must be carried out on the SAFEPROP units to make sure the main centre of the bolt is tight at all times and the pro-loaded pins are in perfect working order prior to use onsite.
- SAFEPROP unit will only support the main prop from 0mm to 50mm deflection movement.
- SAFEPROP unit will support and transfer the main prop loads up to 15mm and after 15mm deflection occurs in the SAFEPROP only stops the main prop from falling over up to 50mm deflection.
- SAFEPROP unit can be fitted both on the top and base of the main props.
- SAFEPROP unit spring is warranted for 100,000 cycles.
- PPE to be worn at all times when activating and deactivating SAFEPROP units onsite.
- If you have any doubts about the correct use, adjustment or maintenance of the equipment, ask your supervisor.
